PROFESSIONAL SUMMARY

Business Analyst covering process, systems and data, with an MBA in Data Science and Analytics (9.0 CGPA) and a B.Tech in Automobile Engineering (All Kerala 2nd Rank), pairing shop-floor process knowledge with SQL, Python and AI automation. Sole analysis and systems resource at a manufacturer: requirements at Managing Director level, 40+ workflows redesigned for an 80% cut in manual effort, and the company's first data layer with MIS reporting on top, used daily by 10+ staff across five departments. Receivables analysis uncovered INR 19.1 lakh of invisible overdue.

SKILLS

- **Business Analysis:** Requirement Gathering (Managing Director level), Requirement Specifications, As-Is to To-Be Process Mapping, Gap Analysis, Solution Design, User Acceptance Testing (UAT), Standard Operating Procedures (SOP), Cross-Departmental Rollout, Jira, Confluence, Figma (Wireframing)
- **Business Systems and Delivery:** End-to-End Build and Deployment, Workflow Automation, Google Apps Script, Node.js, Docker, Git, ETL (Extract, Transform, Load) Pipelines, Data Modelling
- **Artificial Intelligence (AI) and Automation:** Large Language Model (LLM) tools (Claude, ChatGPT) for code generation, review and debugging; AI-powered workflow automation in production; Vision Model Extraction (Google Cloud Vision, Gemini Vision); Prompt Design
- **Management Information Systems (MIS) and Business Intelligence (BI):** MIS Reporting, SAP HANA, Enterprise Resource Planning (ERP), Power BI, Tableau, Looker Studio, Key Performance Indicator (KPI) Dashboards, Advanced Excel (Pivot Tables, Power Query), Google Sheets
- **Data Analysis:** SQL (Structured Query Language) – Window Functions, Common Table Expressions, Joins; MySQL, Data Warehousing, Python (Pandas, NumPy, Scikit-learn), Exploratory Data Analysis (EDA), Root Cause Analysis, Cohort and Segmentation Analysis, Pareto and ABC Analysis
- **Analytics and Machine Learning:** Predictive Analytics, Statistical Analysis, Regression, Random Forest, K-Means Clustering, Time-Series Forecasting, RFM Segmentation, Churn Prediction
- **Domains:** Manufacturing Operations, Production Monitoring, Procure-to-Pay (P2P), Order-to-Cash (O2C), Inventory and Warehouse, Accounts Receivable, Goods and Services Tax (GST) Invoicing

WORK EXPERIENCE

MIS Executive – Business Analysis & Systems

Jain Wire Netting Corporation, Angamaly, Kerala | May 2026 – Present

- Gathered requirements at Managing Director level across five departments, wrote the specifications, built each system, ran User Acceptance Testing (UAT) and rolled it out.
- Redesigned 40+ operational processes as-is to to-be, cutting daily manual effort by 80%.
- Built the company's first structured data layer: paper and spreadsheet records across five departments into queryable datasets feeding all MIS reporting.
- Delivered the daily MIS pack: Power BI and Looker Studio dashboards, Apps Script KPI panels and a Production Monitoring Sheet for planned-versus-actual output by shift.
- Analysed procurement, sales and inventory data in SQL and Python to quantify bottlenecks, customer value and demand, setting purchasing and collection priorities.
- Automated a zero-touch sales dashboard: a scheduled pipeline parses new GST invoice PDFs, reconciles tax and republishes revenue KPIs each morning.
- Redesigned the BBI line's operator review into an unattended pipeline over 300+ shift records, giving supervisors weighted achievement %, day-versus-night splits and a ranked scoreboard.
- Automated an hourly receivables workbook over a live 325-bill tracker (INR 1.35 crore), rebuilding only on change and preserving run history.
- Architected a cloud-hosted AI document-extraction service (Node.js, Docker, Google Cloud Vision) converting about 1,000 invoice PDFs monthly into line-item data.

- Embedded AI into live operations: vision models read odometer photos and supplier invoices into validated data with no manual keying; Claude and ChatGPT generate and review the code behind 40+ systems.
- Built a daily accountability register over 8 Flow Management trackers and a recurring task checklist, mapping each process step to its owner, method and turnaround time, and rebuilding only on change.

Lecturer

Nirmala Institute of Technology, Kerala | Jun 2025 – Apr 2026

- Built Excel MIS trackers and an automated course-file system, giving the department audit-ready records.

Service Engineer

TVS Mobility, Kerala | Feb 2024 – May 2025

- Tracked 1,000+ service records in SAP HANA at 95% Service Level Agreement (SLA) adherence, improving warranty turnaround by 20%.
- Diagnosed and repaired 20+ vehicles daily, isolating root causes from customer-reported symptoms.

PROJECTS

- **Procure-to-Pay SLA Analysis (SQL, Python):** Analysed 82 requisitions across a 6-stage pipeline; found Payment the primary bottleneck (43-hour delay, 62.5% breach rate) against a 15.2-day cycle time, and built a classifier flagging at-risk requisitions.
- **Customer Value Analysis, CRM (SQL, Python):** Analysed 206 bills across 110 customers (INR 92.5 lakh) with RFM, Pareto and ABC analysis; models flagged high-value customers at up to 92.9% accuracy.
- **Inventory and Reorder Analysis (SQL, Python):** Analysed 130 products (13,339 units) to classify stock status and set reorder priorities; Random Forest model validated at a mean absolute error of about 13 units.
- **Receivables Ageing and Collections Analysis (Google Sheets, Python):** Analysed 325 bills across 121 customers (INR 1.35 crore); found 190 of 324 reminders (59%, INR 69.6 lakh) scheduled after the due date.
- **Systems Delivery Portfolio Analysis (Google Sheets, Automated Reporting):** Analysed 84 builds across 61 processes; the register overstated live delivery by 75% (48 live against 84 logged), with rollout decay from 81.3% to 42.3%. Now a self-refreshing report.
- **Machine Maintenance Requisition Bottleneck Analysis (Google Sheets, MySQL, Python):** Analysed a 31-request BB1 machine-maintenance pilot across a 7-stage approval workflow; found Head of Department (HOD) approval the primary bottleneck (39% stalled there) and built a classifier flagging at-risk requests.
- **Process Service Level Agreement (SLA) Compliance Analysis, 9 Flow Management Trackers (Google Sheets, Python):** Compared planned versus actual timestamps across 5,423 workflow steps; isolated 324 late steps (6.0%) in one tracker. Now a daily pipeline refreshing an Excel workbook and a live dashboard.
- **Customer Churn Prediction (Python, KNIME, Tableau):** Built and evaluated a churn model scoring accounts by attrition risk to target retention before renewal.
- **Odometer Photo-to-Kilometre Automation (Apps Script, Gemini Vision AI):** Event-driven pipeline reading each driver odometer photo with a vision model into a validated kilometre reading across 224 dispatch records, with per-row status flags.
- **Business Systems Built (Google Apps Script):** 24-module Human Resource Management System (HRMS) used daily by HR; 10+ Flow Management trackers with timestamped steps; a Machine Breakdown Tracker with downtime cost dashboard; a Student Management System.

EDUCATION

- MBA, Data Science and Analytics – JAIN University | 2024 – 2026 | CGPA 9.0
- B.Tech, Automobile Engineering – SCMS School of Engineering and Technology | 2019 – 2023 | CGPA 8.4

CERTIFICATIONS

- Microsoft Career Essentials – Business Analytics, Generative AI, Project Management | Apr 2025
- KNIME – Data Science | Apr 2025
- OpenEDG Python Institute – Python | May 2025
- LinkedIn Learning – Generative AI for Learning and Development; Building AI Products | May 2025
